CHANGES	
The major changes compared to the previous version SATELLINE SaTerm 5.2.1 are listed below.	
Enhancements	<p><b>1. Terminal port with USB devices.</b></p> <p>When the terminal port is closed from the menu and the USB device is disconnected and reconnected, the port should not open automatically. The sleep mode also retains the status of the ports.</p>
Defect fixes	<p><b>1. Erroneous value indication</b></p> <p>Erroneous values in feature windows are indicated with red color, now the color will turn black when the corrected value is sent.</p> <p><b>2. Frequency parameter handling</b></p> <p>In the Message Routing setting, using a comma in "Ref Frequency" (e.g., "439,125") sets an incorrect frequency "43000009". This caused an error message "TX Frequency" in SaTerm, and the device could no longer be configured. Now, the frequency parameter input notifies the user with red text that the frequency value should use a dot instead of a comma as the MHz separator.</p> <p><b>3. Mobile Routes feature</b></p> <p>The Mobile routes feature did not work in the previous version of Sateline SaTerm v. 5.2.1 and has now been fixed to function properly.</p> <p><b>4. Sateline SaTerm v.4 .ssf files</b></p> <p>The .ssf files created with the old Sateline SaTerm v. 4 now open correctly with Sateline SaTerm v. 5.x versions.</p>

COMPATIBILITY
<p>The appropriate SATELLINE SaTerm Modem Files (.smf) are available from from <a href="https://www.satel.com/support-and-services/downloads/">https://www.satel.com/support-and-services/downloads/</a> page.</p> <p>Network project files from SATELLINE SaTerm 5.x are not compatible with SATELLINE SaTerm 4.x version. Network project files from SATELLINE SaTerm 4.x can be opened and used with SATELLINE SaTerm 5.x version.</p> <p>The current variant is compatible with Win10 64-bit OS and Win11 64-bit OS.</p>
